But just in case someone fails the exam, we guarantee we will refund unconditionally [Instant DCP-315P Discount](#) in 3 days after you send the unqualified exam score to us, We believe you can successfully pass the test with your unfailing effort.

Professional and responsible experts.

NEW QUESTION: 1

You have a Microsoft Power BI data model that contains three tables named Sales, Product, and Date.

The Sales table has an existing measure named [Total Sales] that sums the total sales from the Sales table.

You need to write a calculation that returns the percentage of total sales that a selected ProductCategoryName value represents. The calculation must respect any slicers on ProductCategoryName and must show the percentage of visible total sales. For example, if there are four ProductCategoryName values, and a user filters one out, a table showing ProductCategoryName and the calculation must sum up to 100 percent.

How should you complete the calculation? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: CALCULATE

CALCULATE rvaluates an expression in a modified filter context.

Box 2: DIVIDE

As a data modeler, when you write a DAX expression to divide a numerator by a denominator, you can choose to use the DIVIDE function or the divide operator (/ - forward slash).

When using the DIVIDE function, you must pass in numerator and denominator expressions.

Box 3: ALLSELECTED

ALLSELECTED removes context filters from columns and rows in the current query, while retaining all other context filters or explicit filters.

The ALLSELECTED function gets the context that represents all rows and columns in the query, while keeping explicit filters and contexts other than row and column filters. This function can be used to obtain visual totals in queries.

Example:

```
measure 'Reseller Sales'[Reseller Visual  
Total]=calculate(sum('Reseller Sales'[Sales Amount]),  
ALLSELECTED()) Reference:

NEW QUESTION: 2

Welche Sprache wurde hauptsächlich zum Abfragen, Ändern und Verwalten von Datenbanken in einem relationalen Datenbankverwaltungssystem entwickelt?

- A. Visual Basic
- B. C ++
- C. SQL
- D. Java

Answer: C

Explanation:

Erläuterung:

SQL ist eine spezielle Programmiersprache für die Verwaltung von Daten in einem relationalen Datenbankverwaltungssystem (RDBMS).

NEW QUESTION: 3

- A. Option A
- B. Option C
- C. Option B
- D. Option D

Answer: C

Explanation:

Office Telemetry consist of the followings 5 components :

- *A simple network shared folder
- *Telemetry Processor
- *Telemetry database
- *Telemetry Dashboard
- *Telemetry Agent

The first 4 components are considered Server-side, while the Telemetry Agent is the client-side.

Note: To enable and configure the telemetry agent, you can edit the registry on each monitored client computer in small or test

environments. For production environments that contain hundreds or thousands of client computers, you can use Group Policy administrative templates.
