**Answer:**

Explanation:

\* Service 1

As the package must be retained we should deploy it through the Azure Storage cloud.

\* Service 2

As maintaining the existing storage package is not required we can deploy the package locally.

\*Azure service package

Whenever you want to deploy your application to a Cloud Service you'll be creating a Service Package and upload it, together with the Service Configuration to a deployment in a Cloud Service. These two artifacts are what makes up a Cloud Service deployment.
