Note:
* The System.Runtime.Serialization namespace contains classes
that can be used for serializing and deserializing objects.
Serialization is the process of converting an object or a graph
of objects into a linear sequence of bytes for either storage
or transmission to another location. Deserialization is the
process of taking in stored information and recreating objects
from it.
* EmitDefaultValue
DataMemberAttribute.EmitDefaultValue Property
Gets or sets a value that specifies whether to serialize the
default value for a field or property being serialized.
true if the default value for a member should be generated in
the serialization stream; otherwise, false.
