NEW QUESTION: 3

You support Microsoft Lync Server 2013 servers in your customer's company network. The network includes an Active Directory Domain Services (AD DS) domain and an Exchange 2010 organization. The company deployed a pilot Microsoft Exchange 2013 installation at one of its branches and moved the branch users' mailboxes to Exchange 2013. Lync users from the branch were configured to use the Unified Contact Store. Due to budget limitations, the company has decided to move the users' mailboxes back to Exchange 2010. Before you move the users' mailboxes, you need to change the users' properties. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Run the `Move-CsUser` cmdlet for every user account.
- B. Run the `Test-CsUnifiedContactStore` cmdlet once.
- C. Run the `Set-CsUserServicesPolicy` cmdlet once.
- D. Run the `Invoke-CsUcsRollback` cmdlet for every migrated user account.

Answer: C,D

See explanation below.

Explanation

Step 1: Create a CSV file that contains information about the searches you want to run The comma separated value (CSV) file that you create in this step contains a row for each user that want to search. You can search the user's Exchange Online mailbox (which includes the archive mailbox, if it's enabled) and their OneDrive for Business site. Or you can search just the mailbox or the OneDrive for Business site. You can also search any site in your SharePoint Online organization. The script that you run in Step 3 will create a separate search for each row in the CSV file.

1. Copy and paste the following text into a .txt file using NotePad. Save this file to a folder on your local computer. You'll save the other scripts to this folder as well.

file lists the parameters that will be used by

New-ComplianceSearch cmdlet to create a new Content Searches.

Each parameter name is separated by a comma. Make sure there aren't any spaces in the header row. Each row under the header row represents the parameter values for each search. Be sure to replace the placeholder data in the CSV file with your actual data.

2. Open the .txt file in Excel, and then use the information in the following table to edit the file with information for each search.

3. Save the Excel file as a CSV file to a folder on your local

computer. The script that you create in Step 3 will use the information in this CSV file to create the searches.
